1: Product Overview

Welcome to the Bibzy Baby Carrier - Cradle & 5-in-1 Modular Design

The Bibzy Baby Carrier is a versatile, ergonomic babywearing solution designed to grow with your child. It includes a detachable cradle carrier for newborns and multiple vertical carry options for infants and toddlers. Whether you're at home or on the go, Bibzy ensures safety, comfort, and hands-free convenience.

Model: 101

Manufacturer: Bibzy LLC

Address: 2732 Hidden Springs Loop SE Lacey WA 98516

Washing Instructions: Machine wash on a gentle cycle with mild detergent. Do not bleach or iron. Air dry only.

Key Features:

- 6+ carry positions including newborn cradle and seated bassinet
- Modular design with zip-on vertical carrier panel
- Detachable head support pillow for cradle mode
- Wide, padded cross-back shoulder straps
- Dual storage pockets on waist belt
- Secure nipple-lock buckles and reinforced seams
- Supports ergonomic “M” shape seating

Recommended Uses:

- **Cradle Carry Mode:** 0-6 months

- **Vertical Carrier Mode: Front Inward Carry** (Recommended for 4+ months with head/neck control)

- **Vertical Carrier Mode: Front Outward Carry** (Recommended for 6+ months with strong head and neck control)

- **Hip Seat Carry Mode**

- **Bassinet Carry Mode**

3: Cradle Carry Instructions

When to Use

0–6 months

The **Cradle Carry** mode is designed for newborns from birth to 6 months. It provides a soft, reclined position that supports the baby's spine, neck, and head while keeping the baby close and visible at all times.

Step-by-Step Instructions

1. Wear the Waist Belt and Position the Hip Seat

- Wrap the **waist belt** around your lower torso, with the **hip seat facing forward**.
- Fasten the **main buckle** until it clicks securely (see image below, left).
- Tighten the strap by pulling the webbing through the buckle until snug.
- Adjust the position of the **hip seat** so it sits **just above your hips** and **slightly angled upward** (see image below, right).

2. Secure Shoulder Straps

- Slip each shoulder strap over your shoulders, like wearing a backpack.
- Make sure the straps cross at the back in an “X” shape.
- Adjust the strap tension so they rest comfortably on your shoulders without digging in.
- Connect the shoulder strap snaps or nipples to the front of the vertical carrier.
- Confirm that both sides are evenly adjusted and the carrier feels balanced.

3. Place the Baby in the Cradle Bassinet

- Lay the cradle carrier flat on a secure, flat surface (e.g., table or bed).
- Ensure the detachable head pillow is attached securely at the top of the cradle area.
- Unbuckle the central harness strap.
- Gently place the baby on their back, with the head resting on the pillow and feet pointing toward the bottom of the cradle.
- Position the baby so that the hips and legs are naturally bent in a relaxed position.
- Bring the central strap over the baby's lower torso and legs.
- Buckle the strap and ensure it clicks securely.
- Adjust the strap tension so the baby is snug but not compressed – you should be able to fit two fingers between the strap and baby's body.

- Double-check that the baby's head is elevated, chin is not pressed to the chest, and airway is clear.
- 4. Attach the Cradle Bassinet to the Hip Seat
- Lay the hip seat flat and identify the front zipper track near the seat edge.
- Take the cradle bassinet attachment and align its bottom zipper with the zipper on the hip seat (see image below, right).
- Zip the two pieces together fully to secure the cradle base to the seat.
- Ensure the cradle lies horizontally and is centered across your body when worn.

5. Secure the cradle bassinet attachment

- Wrap the cradle bassinet attachment under the cradle, up across the baby like a sash, and over your shoulder.
- Clip the strap to the nipple anchor on the opposite shoulder strap from where the baby's head is located.
- This diagonal connection creates a sling-style support and prevents downward sagging.
- Pull the strap snug so the baby is cradled gently but securely.

6. Attach the Lateral Stabilizer Strap

- Locate the short stabilizer strap at the top corner of the cradle (see image above).
- Clip this strap to the nipple anchor on the adjacent shoulder strap – the same side of the baby's feet.
- This stabilizing strap prevents the cradle from rotating or tilting during movement and keeps the carrier evenly balanced.

7. Final Safety Check

- Baby should be in a relaxed reclined position, fully supported by the cradle and straps.
- Ensure both straps are snug, buckles are secure, and the cradle is flush with the hip seat.
- Make sure the baby's airway is unobstructed: face visible, head supported, and chin away from chest.

4: Switching from Cradle to Vertical Carrier

As your baby becomes more alert and gains better head and neck control, you can transition from the Cradle Carry to a vertical upright carry using the vertical carrier attachment. This setup allows the baby to sit either inward- or outward-facing while securely supported against your torso. To transition your Bibzy Carrier from **Cradle Mode** to **Vertical Carrying**, follow these steps.

When to Use

4+ months -Front Inward Carry (Recommended for 4+ months with head/neck control)

6+ months -Front Outward Carry (Recommended for 6+ months with strong head and neck control)

Step-by-Step Instructions

1. Remove the Cradle Bassinet

- Unbuckle and release the lateral stability strap from the shoulder strap nipple.
- Detach the cradle bassinet attachment from the shoulder buckle and hip seat zipper.
- Set the cradle bassinet aside.

2. Attach the Vertical Carrier to the Hip Seat

- Locate the vertical carrier attachment (see image below, left).
- Align the zipper on the base of the vertical carrier with the zipper slot on the front of the hip seat (see image below, right).
- Zip the two pieces together until fully secure.

3. Place the Baby in the Vertical Carrier

Choose the carry position appropriate for your baby's age and developmental stage:

Front Inward Carry (Recommended for 4+ months with head/neck control)

- Hold your baby against your chest, facing you.

- Gently lower the baby onto the hip seat inside the vertical carrier, ensuring their bottom rests fully on the seat.
- Make sure your baby's legs straddle the seat naturally in an "M" shape (knees higher than bottom).
- Pull the body of the vertical carrier up over the baby's back and shoulders.
- Ensure the baby's face is visible and close enough to kiss.
- Proceed to buckle and adjust all straps (see Step 4).

Front Outward Carry (Recommended for 6+ months with strong head and neck control)

- Turn your baby to face outward, away from your body.
- Lower them onto the hip seat so they sit comfortably on the hip seat inside the vertical carrier.
- Ensure their legs are extended through the leg openings, supported at the thighs.
- Pull the front panel of the carrier up between the baby's legs and over their lower torso.
- Ensure their arms rest comfortably outside the carrier panel.
- Proceed to buckle and adjust all straps (see Step 4).
- Always monitor your baby to ensure their airway remains unobstructed and their posture is upright and well supported.

4. Secure All Buckles

- Attach the top shoulder straps of the vertical carrier to the female clips (nipples) on each shoulder strap.
- Then connect the side support flaps to the hip seat waistband using the buckles located near your hips.

Adjust all straps for a snug, balanced fit. The baby's weight should feel evenly distributed across your torso and hips.

5. Final Check

- Ensure baby's legs are comfortably straddled with knees higher than their bottom.
- Make sure baby's airway is clear, and their chin is off their chest.
- Tighten all buckles slightly if needed to ensure a close, secure hold.

5: Hip Seat Carry

The Hip Seat Carry is ideal for babies who want to observe the world while still being held close. This side-carry position gives the baby a good outward view and allows quick interaction.

When to Use

6+ months: The standalone hip seat carry is suitable for babies who can sit upright unassisted (typically 6+ months). When baby has strong head/neck control and stable sitting posture

The hip seat can be used on its own as a quick, ergonomic support for carrying your baby without attaching the vertical or cradle carrier. This mode is ideal for short periods of holding and quick pick-ups around the house or while on the go.

Step-by-Step Instructions

1. Detach Accessories

- Remove the vertical carrier or cradle bassinet attachment from the hip seat by unzipping or unclipping them completely.
- Ensure the seat surface is flat, unobstructed, and securely fastened to your waist.

2. Wear the Waist Belt

- Wrap the waist belt around your lower torso, positioning the hip seat slightly above your hip bones.
- Buckle the waist belt securely (listen for a click).
- Tighten the strap by pulling the webbing until snug. The lumbar pad should rest centered on your lower back.
(Optional: You can rotate the hip seat slightly to your side if using it as a side carry position.)

3. Position the Baby

- Hold your baby securely against your body.
- Gently lower the baby onto the hip seat, either directly in front of your torso or on the side of your hip.
- Use one arm to support your baby's back and head, while the other arm holds the baby's bottom or wraps around for added stability.

Tips for Safe Use

- Keep one hand on your baby at all times when using the hip seat alone.
- Make sure your baby is seated deep into the seat and that their legs wrap around your body in an "M" shape for proper hip positioning.
- Keep your baby close enough to kiss and ensure their airway is always clear.
- Regularly check that the seat remains level and snug at the waist.

6: Bassinet Carry

The Carry Bassinet position is an extension of the cradle carry. It lets the baby rest in a reclined, open cradle while the parent remains mobile. This position is excellent for quiet time or nap support during early months.

When to Use

0-6 months - When baby needs a more reclined rest position and still be carried.

Step-by-Step Instructions

1. Prepare the Cradle Carrier

- Lay the cradle carrier flat on a secure, soft surface (e.g., table, bed, or floor).
- Ensure the detachable head pillow is securely in place at the top of the cradle.
- Unbuckle the central harness strap.

2. Position the Baby

- Gently place the baby on their back inside the cradle carrier, with their head resting on the pillow and feet pointing toward the bottom.
- The baby's hips and knees should rest in a naturally relaxed, bent "froggy" position.
- Ensure baby's arms fall comfortably at their sides or across their body.

3. Secure the Baby

- Pull the central strap over the baby's body and fasten the buckle over their lower torso and legs.
- Tighten the strap just enough so the baby feels snug and supported, you should be able to insert two fingers between the strap and baby's body.
- Double-check that the baby's head is elevated, airway is clear, and chin is not tucked against the chest.

4. Use the Handles to Carry

- Grab both side handles of the cradle carrier and lift evenly with both hands.
- Always use both handles when carrying the cradle bassinet – never carry with one hand.
- Keep the cradle close to your body when moving from room to room.

Important Notes

- Place the cradle on a flat, stable surface where it cannot tip or wobble.
 - Ensure the baby remains securely buckled at all times while in the bassinet.
 - Do not leave the baby unattended in the cradle bassinet on elevated surfaces.
 - Not intended as a replacement for a crib, cradle, or sleep surface.
 - Only use on flat surfaces and never in a moving vehicle.
-

7: Adjustment & Fit Guidelines

Proper fit is essential to ensure comfort and safety for both the baby and the wearer. Always check your Bibzy Carrier before each use.

Waist Belt

Position low and tight on your hips

Lumbar pad should sit centered on lower back

Shoulder Straps

Can be worn crisscross (“X”) or parallel (“H”) style

Adjust so the baby is high on your torso (“close enough to kiss”)

Pull strap ends downward to tighten and lift baby higher

Baby’s Position

Seat the baby deep into the carrier with knees **higher than bottom** (“M” shape)

Spine should form a gentle C-curve

Head and neck should be supported until baby can hold head up consistently

Cradle/Bassinet Specific

Keep baby angled at ~45 degrees

Never allow chin to touch chest

Adjust the head pillow as needed based on baby's growth

Visual Checkpoints

Face visible at all times

Airway clear

Carrier snug, not loose or dangling

Baby's weight evenly distributed

8: Safety Warnings

YOUR CHILD'S SAFETY IS YOUR RESPONSIBILITY. PLEASE READ AND FOLLOW ALL GUIDELINES CAREFULLY. IMPROPER USE MAY RESULT IN SERIOUS INJURY OR SUFFOCATION.

General Safety Guidelines

Always keep **baby's face visible** and **airway clear**

Ensure **chin is off the chest** to avoid breathing restriction

Monitor baby frequently during use, especially while sleeping

Never use the carrier while operating vehicles or heavy equipment

Only use Bibzy Carrier with **one child at a time**

Age and Weight Limits

Cradle Carry: **0-6 months** (typically under 14 lbs / 6.4 kg)

Other Carry Positions: Suitable from approximately **3 months and up**, depending on baby's size and developmental stage

Do not use **outward-facing** carries until your baby has strong head and neck control

Fall Hazard

Ensure all **buckles, straps, and zippers** are **secure** before every use

Always **support baby** when **adjusting the carrier**

Do not lean forward or bend at the waist without supporting baby with one hand

Suffocation Hazard

Make sure baby's **nose and mouth** are **unobstructed**

Avoid over-tightening the cradle sling

Do not allow fabric to cover baby's face

Usage Restrictions

Do not use carrier during vigorous activity (e.g., running, biking, sports)

Not suitable for sleeping unsupervised

Do not use near open flames or hot surfaces (e.g., stoves)

Check to assure all buckles, snaps, straps, and adjustments are secure before each use.

Check for ripped seams, torn straps or fabric and damaged fasteners before each use.

Ensure proper placement of child in product including leg placement.

For soft carriers that have use positions where the child can either face the caregiver or be

in an outward facing position, an informational statement shall address the following: Baby

must face towards you until he or she can hold head upright.

Premature infants, infants with respiratory problems, and infants under 4 months are at

greatest risk of suffocation. Never use a soft carrier when balance or mobility is impaired because of exercise,

drowsiness, or medical conditions.

Never use a soft carrier while engaging in activities such as cooking and cleaning which

involve a heat source or exposure to chemicals.

Never wear a soft carrier while driving or being a passenger in a motor vehicle.

9: Washing & Maintenance

Proper care ensures your Bibzy carrier remains hygienic and durable through long-term use.

Washing Instructions

Machine wash **cold on gentle/mild setting**

Use **mild detergent only**

Do **not bleach**, iron, or dry clean

Air dry flat (avoid tumble drying to preserve fabric integrity)

Before Washing

Detach the cradle pillow before placing the carrier in the machine

Close all buckles and zippers to avoid snags

If possible, place the carrier in a **laundry bag**

Routine Maintenance

Inspect carrier regularly for:

- o Loose stitching
- o Worn buckles or straps
- o Fraying fabric or padding

Stop using immediately if you see any damage

Store in a cool, dry place out of sunlight

10: Contact Information & Warranty

Thank you for choosing the Bibzy Baby Carrier - Cradle & 5-in-1 Modular. We are committed to helping parents and caregivers carry their little ones safely, comfortably, and confidently.
